INDEL USA

OUR FOCUS:

- REPAIR AND TROUBLESHOOTING of industrial electronic equipment. This includes any types of equipment from any manufacturers. We repair new devices as well as 50+ year "dinosaurs" on the component level using methods of reverse engineering and retrofitting.

- DIAGNOSTIC AND TESTING of printed circuit boards, assemblies and whole devices allows to find out a workability of the equipment. We help our customers to make the right decision in order to minimize probable losses prior to repair.

- DESIGN AND RE-DESIGN of custom made electronic devices. Our portfolio includes hybrid logic modules and hybrid modules for driving power transistors as a substitute of obsolete units from various manufacturers such as Allen Bradley, GE, Okuma, Mitsubishi, Fuji, etc.

- PREVENTIVE MAINTENANCE includes

tests, measurements, adjustments and parts replacement, performed specifically to prevent faults from occurring. This is a simple way to reduce customer's time and money for supporting equipment in working condition for a long time without expensive repair.

Our team consists of highly educated and qualified engineers with 30+ year experience in repair and design. This enables us to save you time and money and guaranties the quality of our services.
